

Gaba Aid (DMF Grade)

***** Why a doctor should prescribe Gaba-Aid instead of Pregaba (OPL)/Pegalin (Popular)/Neugaba (SUN)/Lyric (HTL)/Prelica (RD)?**

Ans:

Our Gaba aid is DMF grade Pregabalin so Gaba aid is more risk free than conventional Pregabalin due to contain minimum impurity.

***** Why a doctor should prescribe Gaba-Aid instead of Gabapentin (Gabapen (IAP), Gabastar (SQA))?**

Ans:

- The bioavailability of Pregabalin is higher. So it shows maximum efficacy
- Absorption kinetic is linear
- Compared to Gabapentin, Pregabalin required lower dose
- Pregabalin shows less side effects

***** Why a doctor should prescribe Gaba-Aid instead of Vitamin B1+B6+B12 (Neucos B (RD), Neuro B (SQA))?**

Ans:

Ans:

- Pregabalin is the first line option for neuropathic pain but B vitamins (B1, B6 & B12) are only supplementary medication.
- Pregabalin starts relieving pain from day-1 but in case of B vitamins (B1, B6 & B12) pain reduction depends on the status of supplementation
- In case of Pregabalin significant pain reduction is achieved within first week but B vitamins (B1, B6 & B12) may take 3-4 weeks to get pain relief

***** Why a doctor should prescribe Gaba-Aid with NSAIDs combined?**

Ans:

Ans:

- Combination of Pregabalin & NSAIDs provides therapeutic advantages by giving synergistic action in treating chronic painful conditions.
- Reduces the use of Opioid & duration of treatment.

***** Why a doctor should prescribe Gaba-Aid after surgery (Total Knee Arthroplasty)?**

Ans:

Ans:

- Significantly reduces postoperative severe or chronic pain

Relaxes joint stiffness

Increases angle range of motion up to 84 degrees.
